

Herman Suykerbuyk

Business Data Engineer | Platform Engineer | Data Infrastructure | ETL & Pipelines

3-5 years experience

Mechelen, Belgium | +32 491 12 54 20 | suykerbuykh@gmail.com | linkedin.com/in/herman-suykerbuyk-16299323b | github.com/Hermannnnnnnn

ABOUT ME

Business Data Engineer with 3-5 years of experience across data engineering and platform engineering.

Data Engineering: Two years building end-to-end data transformations - from ingestion pipelines to Data Vault and dimensional modelling.

Platform Engineering: Helped build a new platform on Airflow, dbt and Databricks - enabling faster delivery through reliable pipelines, reusable tooling, test automation and CI/CD.

Leadership: Improved how teams work: reducing unnecessary meetings, consolidating documentation, strengthening refinement sessions, challenging unsuitable frameworks, introducing future-proof solutions and Communities of Practice (COP).

Location

Based in Mechelen, Belgium - open to hybrid/remote. Willing to commute within region.

Current Circumstances

Business Data Engineer, currently working as Platform Engineer. Open to new opportunities.

Languages

Dutch (native), English (professional), French (basic)

Work Preferences

Interested in both technical depth and people leadership.

TOOLSTACK

Languages

Python SQL PL/SQL Groovy Shell Terraform

Data & Transformation

ODI dbt Data Vault 2.0 Dimensional Modelling Vaultspeed

Orchestration & Platform

Apache Airflow IWS Databricks Oracle Lakeflow Connect AKS Azure

Engineering Practices

pytest GitHub Actions CI/CD Confluence JDBC

EXPERIENCE

Data Engineering

ETL / ELT

● Pipeline Development:

Built and maintained end-to-end ETL pipelines: ODI (Oracle) and dbt for transformations, IWS and Apache Airflow for orchestration. Much of my work as a data engineer (on Oracle) went into writing PL/SQL and Groovy to generate production scripts and accelerate delivery for the whole team.

● Ops:

Weekly Ops rotations. Deepened product knowledge, troubleshoot production issues (e.g., mining metadata tables for root causes) and proposed several improvements to the Ops process.

● Transformation Logic:

Co-authored "Big Book of dbt": the organization's manual of best practices for type casting, deduplication, business-logic encapsulation, test tagging, naming conventions.

Testing

● Load testing:

Revived an underused PL/SQL testing framework: added test templates, expanded coverage beyond file ingestion, and prevented integrity issues before they reached the Data Vault and dimensional model.

- **Unit & regression testing:**

Built an automated testing tool in Python with GitHub, CI/CD and Python. The framework runs a comprehensive suite of tests on source ingestion (source to Data Vault) or presentation (Data Vault to dimensional model) and is still used today, replacing the tedious manual testing cycle. Found many data issues, sped up testing and increased business trust in the data.

Modeling

- **Data Vault & Dimensional:**

Delivered end-to-end solutions from ingestion through Data Vault to dimensional modelling (dimensions/facts, star schema).

Documenting

- **Revamping:**

Found documentation scattered and often outdated. Consolidated in Confluence, rewrote what I could and delegated the rest.

- **Expanding:**

Authored numerous pages to standardise way of working and help future newcomers onboard faster.

Platform Engineering

Testing

- **Infra Regression Testing:**

Took ownership of a pytest regression testing framework for platform components during infra releases. Added tests and refactored codebase with fixtures, modules and markers.

- **Codebase Testing:**

Implemented and owned dbt-bouncer and SQLFluff for defining and enforcing coding standards in CI/CD.

- **Data quality:**

Helped build a framework that pulls test definitions from Collibra, saves them as dbt tests, deploys to production, runs the tests and reports results.

Tooling

- **dbt:**

Wrote macros and materialisation overrides for organisation-wide use. Performed package upgrades, worked out kinks and supported data colleagues. Reduced parsing time and Databricks API calls. Advocated dbt-bouncer/SQLFluff, defined standards with data team, implemented and enforced via CI/CD, documented VS Code setup.

- **Airflow & AKS:**

Wrote Airflow operators and helped build the orchestration framework: a semantic layer on top of Airflow. Data colleagues write YAML with templated tasks instead of raw Airflow code. Improved stability by tuning pod resources, queue setup, and Cosmos WATCHER mode for heavy dbt DAGs. Implemented PVCs, PVC mounts in Airflow Helm, secret scopes and service connections.

- **Databricks:**

Developed Lakeflow Pipelines framework for SQL Server ingestion. Built ingestion framework for on-prem Oracle -> Databricks via Spark JDBC. Helped build trial environment: shallow-clone prod data to trial, deploy release and run DAGs to catch issues before prod. Investigated cost spikes / failing SQL due to excessive Unity Catalog API calls.

CI/CD

- **GitHub Actions & release management:**

Implemented PR validations (SQLFluff, dbt-bouncer, YAML schema) and branch protection. Suggested and built a deploy-branch strategy for concurrent deployments to the same test environment. Brought release management to maturity: built a pipeline to generate releases and release notes, implemented automatic labeling of pull requests with dataproduct tags, offering stakeholders insight.

Lead / Team

Way of Working

- **Team Efficiency:**

Drove organisational change. In first team: reduced unnecessary meetings, introduced Communities of Practice, challenged push for unsuitable framework. In second team: advocated better feature refinement (named stakeholders, consultation, demos) and more demos due to poorly T-shaped team.

Future-proofing

- **Sustainable Solutions:**

Reversed a management-preferred Gherkin/Java decision by delivering a superior Python/GitHub testing framework that was adopted.

- **Process discipline:**

Enforced disciplined change processes, stopping unplanned "cowboy" changes and ensuring proper consultation and analysis.

Mentoring

- **Guiding juniors & newcomers:**

Guided two juniors through onboarding with in-depth weekly demos. Became go-to person for newcomers after authoring numerous Confluence pages.

EMPLOYMENT

2018 - 2022 - Stock Trader - Self-employed

Independent trading before transition to data engineering. Built analytical discipline and self-directed learning.

Sep 2022 - Nov 2024 - Data Engineer - Argenta, Antwerpen

Oracle tool stack. Built ETL/ELT pipelines, Data Vault & star-schema models, automated testing (Python/GitHub Actions) and Confluence documentation overhaul.

Nov 2024 - Present - Platform Engineer - Argenta, Antwerpen

Azure Databricks stack. Airflow/AKS, Databricks Lakeflow/JDBC ingestion, dbt & governance, pytest regression testing, GitHub Actions CI/CD & release management. Little bit of Terraform.

EDUCATION

Formal Education

Sep 2008 - Jul 2012 - Bachelor of Science in Chemistry - University of Antwerp, Belgium

Sep 2014 - Jul 2018 - Bachelor of Science in Mathematics - University of Antwerp, Belgium

Apr 2022 - Sep 2022 - Data Science Training Program - Cevora, Belgium

Certifications

Jul 2023 [Certified Data Vault 2.0 Practitioner](#) [credential]

Dec 2023 [dbt Fundamentals](#) [credential]

Dec 2023 [Databricks Lakehouse Fundamentals](#) [credential]

Mar 2024 [Astronomer Certification - Apache Airflow Fundamentals](#) [credential]

2026 [Cert Prep: Scrum Master \(LinkedIn Learning\)](#) [credential]

2026 [Scrum: Advanced \(LinkedIn Learning\)](#) [credential]
